Subject: Exchange review update

This is to confirm that Richard White is a registered campaigner with BT for the TRELLECK exchange (01600 86 dialling code).

The message that you may have seen when you entered your phone number on the BT availability checker for ADSL broadband means that the exchange has been reviewed previously and at that stage BT were unable to set a trigger level.

However, BT are currently undertaking a review of the remaining exchanges that do not currently have a trigger level set and TRELLECK exchange is included in this wider review. This review process takes account of several different factors including the level of interest shown for broadband in the area. It is therefore important that you continue to give your support to this campaign by registering your interest.

Yours sincerely

Julie Russill
